Functional Details

STYLISH AND SAFE SOLUTION

In addition to their outstanding features, the new fire protection doors "Teckentrup HC"-BS are also characterized by their stylish appearance. The flush-edge door leaf sits perfectly in the frame and forms a flat surface with the wall. Numerous detail solutions, glazing elements, side parts and upper casings enable attractive concepts that expand the design spectrum.

Optional floor seal

Optically attractive
Mitred frame and concealed screw fixing. All doors with top door closer for automatic closing.

Smooth operation
3-piece construction hinges made from galvanized steel with ball bearings are particularly robust and quiet. Also available with stainless steel hinges.

Safe and smoke proof
Pre-drilled holes for latch and bolt in the frame. Optionally available with stainless steel strike plate. Standard version with 3-sided seal in the frame, ensuring smoke protection and low-noise closing.

The correct sequence
With double leaf doors, a special door selector ensures that the inactive door leaf closes before the active door leaf.

Concealed faceplate door lock
With double leaf doors, the inactive door leaf is optionally locked via a concealed internal faceplate door lock.

Safe escape route
Optional equipment for various types of panic hardware is available. Also available in stainless steel.
